

Sam C. Syvertsen

Independent Researcher

Research Interests

Energy economics, financial valuation methods, stochastic market modelling, inequality and sport economics.

Education

Høyere avdeling (Graduate Research Programme), NHH – Norwegian School of Economics 1986

Dissertation: Financing assumptions in project evaluation — methods for assessing debt financing advantages, illustrated with examples from the Norwegian continental shelf

Siviløkonom (MSc equivalent), NHH – Norwegian School of Economics 1980

Majors: Finance, Accounting, Computer Science

Research Assistant, Department of Accounting, NHH 1979–1980

Teaching

NHH – Norwegian School of Economics, Executive MBA in Energy 2003–2006

Course on portfolio management and risk methodology for energy utilities.

Working Paper

Syvertsen, S.C. (2025). *Income Inequality, Sport Cost, and Olympic Performance: Does income inequality affect Olympic performance differently depending on what it costs to participate in a sport?* Active Working Paper.

Publications

Syvertsen, S.C. (2001). *Spotting the Difference: Forward Price vs Expected Spot Price*. EPRM Electricity. An analysis of the relationship between forward electricity prices and expected spot prices in the Nordic power market.

Professional Experience

Statoil (now Equinor) — Corporate Planning Department 1980–1986

- Founded and led the Macroeconomic Analysis Unit from inception — recruited and managed a team of senior economists.
- Acting Head, Project Review (concurrent) — responsible for methods and decision criteria for project evaluation across the organisation.
- Developed an interactive APL-based simulation model (1981–82) enabling real-time analysis of project sequencing and timing decisions across the Norwegian continental shelf pipeline and field development portfolio — presented directly to Statoil's strategic planning committee.
- Client lead on collaborative research project with NHH evaluating decision criteria for oil and gas projects on the Norwegian continental shelf.

Arendals Smelteverk AS / Norton AS / Saint-Gobain AS — CFO & COO

1986–1992

CFO and subsequently COO of world's largest integrated Silicon Carbide plant.

Markedskraft AS (now Volue) — Head of Analysis / Head of Portfolio Management 1992–2007

Managed the development of a pioneering market analysis service following the liberalisation of the Norwegian electricity market.

Relevant academic activities:

- Developed a risk handling methodology for utilities (later taught in executive MBA program)
- Lead editor of annual 30-year forward-looking power market analysis.
- Developed stochastic model of CO₂ certificate markets.

Arendals Fossekompani AS — Investment Director 2007–2017

Worked closely with portfolio companies developing strategy, several with significant R&D focus.

Relevant academic activities:

- Tekna, Quebec, Canada — Chair of Board. R&D-intensive company at the global forefront of induction plasma technology. Setting research priorities required understanding of the research process and commercial environment.

CSUB AS — CFO 2017–2023

World's largest provider of subsea composite structures for oil & gas and composite tanks for land-based aquaculture.

7ertsen AS — Consultant 2003–present

Consulting in financial modelling, simulation, and market analysis. Clients include CSUB and Aquarius.

Technical Expertise

Extensive experience in construction of simulation and quantitative models, including stochastic energy market models, electricity demand forecasts, project evaluation frameworks, and ensemble-based forecasting systems using ECMWF data. Models and decision frameworks built consistently throughout career.

Early adopter of computational tools throughout career — including APL-based interactive modelling in the early 1980s, through stochastic market models and ECMWF ensemble forecasting systems. Extensive use of AI tools for professional research and analysis over the past year.
